

Empower your workforce
with easy to manage
and always on 5G laptops

ERICSSON

The 5G laptop: the always connected work device for AI- and cloud-first teams

Imagine spending a full day without your smartphone – disconnected and out of sync. While we expect instant, secure connectivity from our phones, we often find ourselves searching for unsecured Wi-Fi on our primary work device, the laptop.

In today’s AI- and cloud-powered work, secure and constant connectivity is a necessity. Without it, work stops entirely.

78%

of companies leverage AI. 5G provides a competitive edge ensuring seamless and uninterrupted operations.

Laptops are everywhere – 5G is the logical next step

There are over 1 billion laptops in use globally, yet only a small fraction are always connected. This landscape is set for a major shift. The accelerating adoption of eSIM technology, the broader rollout of 5G-enabled business laptops across OEM lineups, and the move towards AI- and cloud-first work

are increasing demand for secure, always-on connectivity. With 5G, laptops can match the same built-in connectivity we expect from our smartphones. Just open the lid and you’re instantly online – anywhere, anytime – with added layers of security built into 5G.

Be connected –
always

Be productive –
from anywhere

Be secure –
on the go

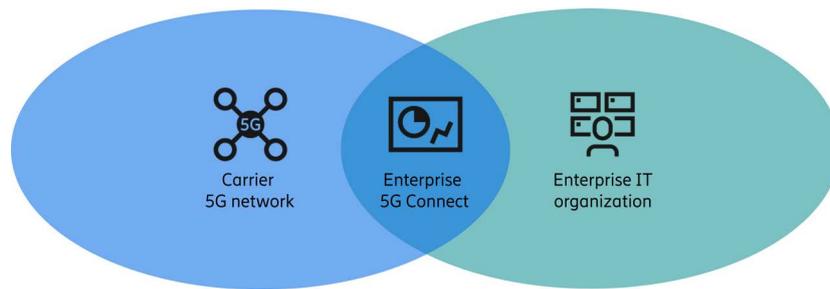

Bridging the gap between 5G networks and enterprise IT

The user value and convenience of 5G laptops is clear. Yet for enterprise IT, managing these devices at scale has been anything but simple. Manual rollouts, little visibility, and limited control over network usage, cost, and performance have slowed adoption.

Ericsson Enterprise 5G Connect changes that. It's a new, revolutionary product, that bridges the gap between operator 5G networks and the enterprise IT organization. Enterprise 5G Connect is the connectivity management tool connecting 5G network capabilities with IT needs.

Through a single pane of glass, IT admins have direct access to tools to provision, monitor, and manage 5G-connected laptops – securely, efficiently, and at scale.

Enterprise 5G Connect is the one-stop-shop for 5G laptop management

Boosts employee convenience and productivity

Solves the challenges of securely managing a mobile/hybrid workforce

Opens the door to a lean and more cost-efficient IT approach

Always-on, 5G-connected laptops make AI-driven work more convenient and productive for employees anywhere. Major IT players already support Enterprise 5G Connect, which brings new 5G security, as well as network transparency, and control, helping IT manage mobile workforces securely. Enterprise 5G Connect also enables 5G connectivity for long-term business transformation allowing enterprises to move towards infrastructure-light models and providing a gateway to a leaner and more cost-efficient enterprise networking.
