

Telefonaktiebolaget LM Ericsson

Conflict Minerals Report for the year ended December 31, 2024

This Conflict Minerals Report of Telefonaktiebolaget LM Ericsson (herein referred to as “Ericsson,” the “Company,” “we,” “us” or “our”) for the year ended December 31, 2024 is provided pursuant to Rule 13p-1 under the Securities Exchange Act of 1934, as amended (the “Rule”). The Rule was adopted by the U.S. Securities and Exchange Commission (the “SEC”) to implement disclosure and reporting requirements pursuant to Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010. As permitted by the Rule and the SEC, this report has not been subject to an independent private sector audit.

1. Introduction

Ericsson enables communications service providers and enterprises to capture the full value of connectivity. The Company’s portfolio spans the following business areas: Networks, Cloud Software and Services, and Enterprise (which includes Global Communications Platform, Wireless Wide-Area Networks and private cellular networks). It is designed to help our customers go digital, increase efficiency and find new revenue streams. This report has been prepared by the management of Ericsson. This report does not include the activities of entities that are not required to be consolidated in our financial statements. In accordance with the Rule, this report is available on our website: <https://www.ericsson.com/en/investors/financial-reports/sec-filings>.

2. Supply Chain Description and Reasonable Country of Origin Inquiry

2.1. General information on Ericsson’s supply chain

Ericsson’s hardware largely consists of electronics. For manufacturing, the Company purchases customized and standardized components and services from both global, regional, and local suppliers. The production of electronic modules and sub-assemblies is mostly outsourced to manufacturing services companies. Ericsson is focusing internal manufacturing on new product introductions and new technologies.

There are often several tiers of suppliers between Ericsson and any smelters or refiners of minerals, even more so when tracing a mineral all the way back to the mines. As a result, the Company does not normally have a direct purchasing relationship with mines, smelters, or refiners.

2.2. Overview of Ericsson’s Conflict Minerals Program and Reasonable Country of Origin Inquiry

Ericsson gathers materials information from our suppliers. Through this process, we know that many of the components used in our products contain small amounts of tin, tungsten, tantalum, gold (“3TG”), cobalt, mica and other critical minerals that are necessary to the functionality of those products. This report only addresses the SEC’s requirements under Section 1502 of the Dodd-Frank Act, which is limited to 3TG. For more information regarding our broader supply chain and how risks are managed, please see Ericsson’s website.

Exhibit 1.01 Conflict Minerals Report

As part of Ericsson's commitment to responsible sourcing and human rights, it is our goal that the 3TG in our products should not, directly or indirectly, finance or benefit armed groups in the Democratic Republic of Congo (the "DRC") or adjoining countries. At the same time, we aim to continue supporting responsible mineral sourcing in the region. Ericsson's efforts with respect to 3TG are aligned with the Responsible Minerals Initiative ("RMI"), and our aim is to improve traceability in our supply chain. Ericsson does not prohibit the sourcing of materials from the DRC or adjoining countries or avoid using 3TG, since Ericsson believes that such a ban could result in negative consequences for responsible mining companies, their workers and the most vulnerable groups in society. The Company has a Conflict Minerals Program to fulfill compliance with the Rule, including performing the Reasonable Country of Origin Inquiry and reporting on 3TG.

Under Ericsson's Code of Conduct for Business Partners, Ericsson relies on its first-tier suppliers to provide information on the origin of 3TG contained in components and parts included in Ericsson's products. This includes sources of 3TG that are supplied to them from sub-suppliers. Ericsson's first-tier suppliers are required to comply with the requirements in Ericsson's Code of Conduct for Business Partners, which requires due diligence to be exercised with respect to the sourcing and extraction of raw materials, including 3TG.

Ericsson's suppliers' due diligence shall be consistent with the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas and the related supplements for 3TG (the "OECD Guidance"). Our first-tier suppliers are similarly reliant upon information provided by their suppliers.

The identification of our first-tier suppliers that are within the scope of the Rule involves different parts of Ericsson's global organization, with our sourcing organization leading and coordinating this work. Suppliers identified to be in scope are our first-tier suppliers supplying (i) products containing 3TG that Ericsson contracts to manufacture, (ii) materials, parts, components and other products, containing 3TG, which are incorporated into or included in a product manufactured by Ericsson, or (iii) materials used in the production of Ericsson's products where 3TG becomes part of the final product. Suppliers of products that Ericsson does not contract to manufacture (i.e., products purchased "off-the shelf") or that are not included in or incorporated into an Ericsson product have been considered out of scope for purposes of the Rule.

In our annual inquiry, we survey first-tier suppliers identified to be in scope, and we analyze and their responses and perform quality checks. In cases of incomplete or unsatisfactory answers, we take necessary steps to obtain complete information before our reporting deadline. In cases where we have identified that a lack of response is due to lack of awareness, we further engage with suppliers to ensure that they are aware of how to identify the required information. We have developed an FAQ for suppliers and update it periodically. See Ericsson's Critical Minerals page for more information. Lessons learned are fed back into Ericsson's cycle of continuous improvement.

Ericsson believes that industry cooperation is one of the best ways to address issues related to 3TG in an efficient and transparent way. We typically do not have a direct relationship with 3TG smelters and refiners, and we do not perform direct audits of these entities within our supply chain. In alignment with the OECD Guidance, we support the RMI's audit of smelters' and

Exhibit 1.01 Conflict Minerals Report

refiners' due diligence activities mainly via the RMI's Responsible Minerals Assurance Process ("RMAP").

3. Due Diligence

Ericsson has a process in place for the purpose of exercising due diligence in the supply chain. For conflict minerals, the due diligence process focuses on the identification and assessment of smelters and refiners, in accordance with the OECD Guidance. Ericsson's due diligence processes have been described below under sub-headings corresponding to the five-step framework of the OECD Guidance.

Ericsson's Conflict Minerals Program identifies the origin of 3TG and assesses whether identified smelters or refiners are aligned with the OECD Guidance. As various human rights and environmental risks, such as forced labor and child labor, health and safety, land-related rights and community rights, are also salient to sourcing of 3TG, Ericsson has introduced additional screenings of identified smelters and refiners and has clarified the expectations for suppliers along the supply chain to the smelter level to meet new RMI standards: The RMI Facility Standard for Social, Environmental, OHS and Governance Risks and the RMI Supply Chain Due Diligence Module Plus ("SCDDP"). See sections 3.3 and 3.4 for more detail.

Ericsson's Modern Slavery Statement, which includes more information about our due diligence in relation to forced labor and child labor, can be accessed on Ericsson's website. Ericsson engages in industry dialogue via the Responsible Business Alliance ("RBA") and RMI in relation to these issues.

3.1. Maintain strong management systems

The first step of the OECD Guidance relates to the establishment of strong management systems. As mentioned above, Ericsson has established a Conflict Minerals Program for reporting on 3TG and compliance with the Rule. Controls include, but are not limited to, our Code of Business Ethics and Code of Conduct for Business Partners, which outline required behaviors for all Ericsson employees and suppliers, and the Ericsson Lists of Banned and Restricted Substances, which include supplier requirements to have diligence processes in place to identify the source and chain of custody of raw materials including 3TG, and are integrated in our template supplier agreements.

In 2024, the identification of smelters and refiners in our supply chain was made via the use of due diligence tools created by the RMI, including the Conflict Minerals Reporting Template (the "Template"). The Template is a standardized supply chain survey designed to gather information regarding the smelters and refiners that process 3TG used in our supply chain. The information from our suppliers, in combination with information from the RMI about their conformant status against the RMI's RMAP, helps Ericsson to obtain information on the origin of minerals processed and assess the smelter or refiner compliance with the OECD Guidance. Ericsson reviews, analyzes and retains the data from the Template.

In Ericsson's Code of Conduct for Business Partners, the topic of responsible sourcing of raw materials is included with clear requirements of suppliers to exercise due diligence in accordance with the OECD Guidance.

Exhibit 1.01 Conflict Minerals Report

In 2025, Ericsson further clarified to suppliers how it works with the RMI and the expectations the Company has for suppliers in the context of other critical minerals legislation. See Ericsson's website for further information on Critical Minerals.

Employees are expected to report concerns related to a violation of the Company's Code of Business Ethics, including violations relating to corruption, fraud, accounting, internal controls, human rights, breach of law, or other matters that could harm the business or reputation of Ericsson, its employees and shareholders, directly to their manager, the superior of their manager or to the People or Legal and Compliance departments. In addition, Ericsson provides employees and external stakeholders, such as suppliers, a dedicated communication channel for reporting any compliance concerns – the Ericsson Compliance Line. The Ericsson Compliance Line is operated by a third party and is available 24 hours per day, seven days per week, 365 days per year. Employees and external stakeholders are encouraged to report conduct that could violate the law or Ericsson's policies, including the Code of Business Ethics or the Code of Conduct for Business Partners. In addition to the Compliance Line, Ericsson is further exploring additional reporting mechanisms for identifying issues related to sourcing of 3TG.

Ericsson has published a "Statement on sourcing of minerals from Conflict-Affected and High-Risk Areas" on its website that indicates Ericsson's position and expected supplier activities in this area.

3.2. Identify and assess risk in the supply chain

In the second step of the OECD Guidance, risks are identified and assessed. For downstream companies such as Ericsson, the focus should be on the smelters and refiners. Downstream companies should, with help from their first-tier suppliers, identify smelters and refiners in the supply chain.

In Ericsson's 2024 Conflict Minerals survey, first-tier suppliers identified to be in scope were requested by Ericsson to provide information on 3TG in their supply chain through completing and submitting the Template. Suppliers were provided with the Template and support material, including instructions and training illustrating the use of the tool that is available on RMI's website. Supplier responses were reviewed against criteria developed to determine which responses required further engagement with our suppliers. In certain circumstances, suppliers were contacted to improve the quality of responses (obtaining missing information, updating Template formats to the required version) and increase the response rate (reminding supplier to provide information with extended deadlines).

3.3. Design and implement a strategy to respond to identified risks

Under the third step of the OECD Guidance, companies are encouraged to design and implement a strategy to respond to identified risks. Due diligence within Ericsson is an ongoing process. Ericsson publishes additional information about its commitment to responsible sourcing and engagement with its suppliers in its Sustainability and Corporate Responsibility Report, published together with the Annual Report.

Ericsson continuously works to improve due diligence processes with respect to 3TG, primarily focusing on the quality of data from suppliers surveyed. This includes communication and collaboration with suppliers for purposes of improving the response rate of surveyed suppliers

Exhibit 1.01 Conflict Minerals Report

and improving the reliability and quality of the information provided. As described above, Ericsson applies a risk-based approach when reviewing and following up on supplier responses and generally prioritizes following up with suppliers that are awarded large parts of Ericsson's business. For example, if a supplier reports non-conformant smelters or refiners, the relevant sourcing responsible manager is notified for purposes of initiating a discussion with the supplier.

In 2024, Ericsson further strengthened its due diligence processes by engaging in additional screenings of identified smelters and refiners against sanctions and forced labor risks. Following a risk-based approach, Ericsson initiated dialogue with suppliers with the aim to address, mitigate or eliminate identified risks.

3.4. Independent third-party audit of smelters' and refiners' due diligence practices

The fourth step of the OECD Guidance focuses on audits of smelters' and refiners' due diligence practices. Through the RBA membership, Ericsson is a member of the RMI, supporting the RMAP as well as the development and implementation of due diligence practices and tools. This includes contributing to the development of new RMI standards: The RMI Facility Standard for Social, Environmental, OHS and Governance Risks and the RMI SCDDP.

Due to the structure of Ericsson's supply chain, there are generally many tiers of suppliers between Ericsson and the smelters and refiners in the supply chain. Therefore, Ericsson does not, as mentioned in section 2.2, perform its own audits of smelters or refiners, but we require smelters and refiners in our supply chain to adhere to RMI's standards or equivalent standards.

With the introduction of the new RMI Facility Standard for Social, Environmental, OHS and Governance Risks and the RMI SCDDP, Ericsson encourages suppliers and sub-suppliers to adhere to such standards.

3.5. Report annually on supply chain due diligence

The fifth step of the OECD Guidance encourages companies to report on supply chain due diligence. Ericsson has a public statement on sourcing of minerals from Conflict Affected and High-Risk Areas, including 3TG, which is available on Ericsson's website.

In accordance with the Rule, Ericsson makes its Conflict Minerals Report available on its website: <https://www.ericsson.com/en/investors/financial-reports/sec-filings>.

3.6 Inherent Limitations of Due Diligence Measures

As a downstream company, Ericsson's due diligence on conflict minerals can provide reasonable—but not absolute—assurance regarding the origin and chain of custody of minerals in our supply chain. Our due diligence process relies on information shared by direct suppliers, who in turn must engage their own supply chains to trace minerals back to the source. We also depend on data provided by established industry assurance programs, such as those operated by RMI. While we take steps to verify and cross-reference information where possible, there are inherent challenges, including the risk of incomplete, inaccurate, or misrepresented data. These

Exhibit 1.01 Conflict Minerals Report

limitations stem from the complexity of global supply chains and the limited transparency available deep in the upstream chain of custody.

Another ongoing challenge in our due diligence efforts is the limited availability of real-time, continuous information on country of origin and chain of custody from our suppliers. The critical minerals supply chain is complex and dynamic, spanning multiple tiers and involving numerous transactions. Raw materials are processed by smelters and refiners into derivatives such as ingots or powders, which are then distributed, sold, stored, and eventually used in manufacturing across global markets. Ericsson does not have direct contractual relationships with smelters and refiners, which means we must rely on our direct suppliers—and the broader supply chain—to collect and pass on accurate information regarding when and how minerals are processed and introduced into the market. This complexity makes it difficult to achieve full traceability in real time.

4. 2024 due diligence result

For the calendar year 2024, we made inquiries on the Tier 1 supplier level. Most supplier responses received provided data at a company or divisional level, with only a few exceptions providing product-level information. This year was 93%.

Ericsson plans to continue to engage with new suppliers, including smelters and refiners, that did not respond in order to increase overall response rates. Among the supplier responses, Ericsson identified 428 smelters and refiners as potential sources of 3TG that were reported to be in the supply chain during the 2024 calendar year. Only one smelter (for tin) is located in the DRC and it is RMAP conformant. Six additional smelters are located in the DRC adjoining countries: one conformant gold smelter in Tanzania; one gold smelter where outreach is required, one conformant tin smelter and one conformant tantalum smelter in Rwanda; and one tin conformant smelter and one gold smelter that is under review by the RMI and cannot participate in RMAP assessments in Uganda. Ericsson is monitoring the situation closely with the RMI and taking action to eliminate the gold smelter in Uganda from the supply chain.

The following table presents, by mineral, the number of identified smelters or refiners verified as conflict-free by the RMAP or mutually recognized audit systems. In case a supplier has identified non-conformant smelters in their supply chain, Ericsson engages with such suppliers to encourage smelters and refiners to participate in RMAP or to phase-out non-conformant smelters and refiners.

Exhibit 1.01 Conflict Minerals Report

Table 1. RMAP Assessment status identified by Ericsson via inquiries to our suppliers in 2025.

Note: The RMAP audit status of smelters and refiners are subject to change, and the below represents information available from RMI on May 28, 2025.

	Alleged	Eligible	Not Eligible	Grand Total
GOLD				
Active		4		4
Communication Suspended - Not Interested		4		4
Conformant		93		93
In Communication		1		1

Grand Total	32	354	42	428

Definitions of assessment status:

- **Alleged** – unknown if entity can undergo RMI assessment. More research needed.
- **Active** – engaged in the program but not yet conformant.
- **Communication Suspended – Not Interested** – facility has strongly communicated a lack of interest in participation to the RMI.
- **Conformant** – independently assessed and found conformant with the relevant RMI Due Diligence standard (RMAP DD or DAP).
- **Non-Conformant** – independently assessed and found non-conformant with the relevant RMI standard.
- **Outreach Required** – outreach needed by RMI member companies to contact entity and encourage their participation to undergo an RMI assessment.
- **RMI Due Diligence Review – Unable to Proceed** – facilities that have not met the threshold for Due Diligence Vetting Process after a period of six months. Status may change if additional information is submitted.
- **Not Applicable** – not eligible for an RMI assessment
- **Not Eligible** – entity cannot undergo an RMI assessment; not included in Eligible Facility List

Ericsson’s knowledge of identified smelters or refiners in the supply chain is limited to the information provided by its suppliers. Based on the information provided by Ericsson’s suppliers during the 2024 calendar year, Ericsson believes that the facilities that may have been used to process 3TG in Ericsson’s products include the smelters and refiners listed in Annex 1 below.

Ericsson does not have enough information to determine with specificity all countries of origin of 3TG in our products, or whether they are from recycled and scrap sources. Nevertheless, based on data from RMI and RMAP, Ericsson generated a list of Reasonable Country of Origin for 3TG based on smelters and refiners identified as shown in Annex 2.

Ericsson supports the refinement and expansion of the list of participating smelters and has determined that seeking information about 3TG smelters and refiners in our supply chain represents the most reasonable effort we can make to determine the mines or locations of origin of 3TG in our supply chain.

During 2025, Ericsson anticipates continuing to review and evolve its conflict minerals due diligence processes with respect to 3TG. As part of these efforts, Ericsson expects to continue to collaborate with suppliers to maintain a high supplier response rate and improve the reliability

Exhibit 1.01 Conflict Minerals Report

and quality of the information provided. Ericsson's engagement in the RMI program will continue.

5. Forward-Looking Statements

Certain of the matters discussed in this report, including in relation to the due diligence processes with respect to 3TG, include forward-looking statements. Readers of this report are cautioned that Ericsson's forward-looking statements are not guarantees of future actions, which may differ materially from the expectations expressed in the forward-looking statements. Ericsson expressly disclaims a duty to provide updates to these forward-looking statements, and the estimates and assumptions associated with them, after the date of this filing to reflect events or changes in circumstances or changes in expectations or the occurrence of anticipated events.

The information included on any websites that appears in this report and other materials referenced to is not incorporated by reference in this report.

Exhibit 1.01 Conflict Minerals Report

Annex 1

Smelters and refiners identified by Ericsson via inquiries to its suppliers during 2025¹. Note that this list includes smelters and refiners not eligible for RMAP.
